6.1 INTRODUCTION

In the previous chapter, we examined the crucial role teachers play in operationalising and evaluating the curriculum, ensuring it aligns with the developmental needs and stage- specific competencies of young children. Understanding curriculum goals is essential, but bringing them to life in the classroom through effective teaching techniques is what truly shapes a child's learning journey.

This chapter builds on that understanding by focusing on practical techniques and pedagogical approaches for teaching at the Foundational and Preparatory stages.

It emphasises the principles of pedagogy, thoughtful lesson planning, building

Notes

Techniques for effective teaching at the foundational and preparatory stage

nurturing relationships, and using developmentally appropriate pedagogical approaches like theme-based, play-based, activity-based, and inquiry-based learning in the teaching-learning process. These practices not only foster cognitive and emotional growth but also lay a strong foundation for lifelong learning. A key focus of the next chapter is on how these pedagogical approaches can be enriched through learning experiences that are rooted in play such as conversations, storytelling, toys, music, art, and craft, which serve as powerful mediums for developing early literacy and numeracy in engaging and meaningful ways.

6.2 LEARNING OUTCOMES

After completion of this chapter, the learner:

- explains principles of effective teaching and learning appropriate for Foundational and Preparatory level learners;
- demonstrates an understanding of age-appropriate pedagogical techniques such as play-based learning, activity-based learning, storytelling, experiential learning, and the use of teaching-learning materials (TLMs);
- designs learner-centered lesson plans that integrate effective pedagogical approaches suited to the developmental needs of young children; and
- outlines a balanced daily schedule that incorporates varied developmentally appropriate activities.

6.3 PRINCIPLES OF EFFECTIVE PEDAGOGY FOR EARLY LEARNERS

• Understanding the Learner

Effective teaching at the Foundational and Preparatory stages begins with a deep understanding of young children- including how they grow, think, learn, and what their age-specific needs, interests, and attention spans are. The foremost principle is child-centeredness, which places the child's interests, experiences, and developmental needs at the core of all teaching-learning activities. It is important that learning experiences are designed to build on children's prior knowledge.

Teaching must be developmentally appropriate, aligned with the

cognitive, emotional, social, and physical capacities of children aged 3 to 8 years. As the NEP 2020 states, “The aim of early education should be to ensure that all children are school-ready, cognitively and emotionally, by the time they enter Grade 1” (NEP 2020, pp. 07, 08).

- **Creating a Safe, Stimulating and Language-Rich Environment**

An essential principle is establishing a safe, clean, engaging, and language-rich environment where children feel physically and emotionally secure, valued, and free to express themselves. Children’s home language is welcome and indeed encouraged in the classroom. Using the local or home language as a bridge to the school language is critical at this stage.

- **Principle of Inclusivity and Child-Centeredness**

This principle focuses on respecting individual differences in learning pace, style, language, and background, ensuring teaching is inclusive and responsive to each child’s unique needs. Classroom learning is closely linked to children’s lives and contexts, using local stories, rhymes, songs, games, crafts, and materials. Encouraging the use of the child’s home language is a vital part of this approach.

- **Play-Based and Activity-Based Learning**

Play is at the heart of learning and development during the early years. It is not merely a teaching method but a guiding principle, as children naturally explore and express themselves through play. When playing, children organise, plan, imagine, manipulate, negotiate, investigate, and create, all while making sense of the world around them. As the NCF-FS notes, “Play is the context, method, and outcome of learning” (NCF-FS 2022, pp. 38-39, Section 1.4).

Effective pedagogy also involves active engagement, providing hands-on experiences that spark curiosity and invite participation. Activities should be joyful and engage all the child’s senses.

- **Principle of Integration and Holistic Learning**

Learning at the Foundational Stage should be holistic and interdisciplinary, weaving together language, numeracy, environmental awareness, and the arts in meaningful ways. It ensures a balanced focus

Notes

Techniques for effective teaching at the foundational and preparatory stage

on all domains-physical, cognitive, socio-emotional, ethical, aesthetic, and cultural development, so that classroom processes address all domains of child development and nurture the child's overall growth.

- **Principle of Scaffolding and Gradual Release of Responsibility**

Effective pedagogy recognizes that children learn best when they receive structured, carefully designed support-known as scaffolding-that helps them grasp new concepts and skills. This support is gradually reduced as children become more confident and independent learners.

This principle is implemented through the Gradual Release of Responsibility (GRR) model, which involves three stages:

- The teacher models or explains the concept or skill.
- The teacher and children work together with guided support.
- Children practice independently, applying their learning on their own.

This ensures challenges are within reach, connected to prior knowledge, and supported by adults or more capable peers.

- **Continuous and Comprehensive Assessment**

This principle ensures that teaching adapts to the unique progress of each child by tailoring instruction accordingly. Through observations, portfolios, holistic checklists, and regular feedback shared with parents, children's development can be systematically tracked to support continuous growth.

- **Nurturing Relationships**

A warm, trusting relationship between teachers and children forms the emotional foundation for learning. Listening carefully to children, building trust, and nurturing motivation are all vital. As highlighted in the NCF-FS, "A warm, responsive adult-child relationship is the foundation for all future learning" (NCF-FS 2022, pp. 90-92), emphasising the importance of emotional security in the early years.

In conclusion, the principles of effective pedagogy must guide classroom planning and instruction at all stages. They affirm that every child is capable of learning

and is a natural learner. Learning is most powerful when it is active, respectful, and engaging, connecting to children's lives and prior experiences. It thrives on varied approaches: discussing, exploring, questioning, experimenting-and emphasizes conceptual clarity, meaningful practice, and appropriate challenge. Such an approach ensures that learning is not only understood but also deeply experienced and applied.

**CHECK YOUR PROGRESS 6.1**

1. What does “child-centered learning” mean?
2. Why is play important in early learning?
3. Which of the following is a key feature of developmentally appropriate practice?
 - a) Assigning uniform tasks to all learners
 - b) Focusing only on academic content
 - c) Aligning teaching strategies with children's age and stage
 - d) Using competitive assessments only
4. The principle of ‘scaffolding’ in early childhood education refers to:
 - a) Providing toys for free play
 - b) Giving support that is gradually removed as the child gains confidence
 - c) Teaching all children in the same way
 - d) Encouraging memorization
5. Which of the following best supports the principle of integrated learning?
 - a) Teaching language and math in separate sessions only
 - b) Encouraging children to play quietly without interaction
 - c) Connecting various subjects through themes and real-life experiences
 - d) Using textbooks as the only source of information

*Notes*

Techniques for effective teaching at the foundational and preparatory stage

6. Positive teacher-child relationships help in:
- Maintaining strict discipline
 - Reducing the need for parental involvement
 - Fostering motivation and a love for learning
 - Speeding up curriculum completion

Answers: 3 - c; 4 - b; 5 - c; 6 - c

6.4 TECHNIQUES FOR EFFECTIVE TEACHING AT THE FOUNDATIONAL AND PREPARATORY STAGE

Teaching at the Foundational and Preparatory Stage is critically important, as it lays the educational and emotional groundwork for all future learning. At this stage, children are naturally curious, energetic, and eager to explore the world around them. Activity and discovery-based pedagogy encourages students to be active within a formal classroom arrangement. Additionally, at the preparatory stage the ability to concentrate and pay continuous attention to classroom lectures and discussions needs to be encouraged. Some amount of the self-paced individual work should be part of the classroom activity, while some amount of homework can be included.

Effective teaching techniques must therefore be rooted in a deep understanding of early childhood development and focused on creating joyful, engaging, and inclusive learning experiences. Rather than relying on rote learning or rigid structures, teachers must adopt age-appropriate, child-centered pedagogical approaches that promote active participation, play, and discovery.

Techniques such as theme-based, play-based, activity-based, inquiry-based learning, and storytelling, along with the use of rich teaching-learning materials (Teacher - made TLM and Digital TLM), help children build foundational skills in literacy, numeracy, communication, creativity, and problem-solving. This chapter explores these techniques in detail, equipping teachers with practical strategies to nurture holistic development and foster a lifelong love for learning in young children.

6.4.1 Theme-Based Approach

The theme-based approach organises learning around a central idea or concept that is meaningful to young children, such as “My Family,” “Seasons,” or

“Animals.” All learning activities—language, math, art, music, and play, are connected to the theme, creating a cohesive and integrated learning experience. This helps children make connections between different concepts and relate learning to their real-life experiences. It encourages curiosity, vocabulary development, and critical thinking.

For example, a theme on “Rain” could include singing songs about rain, drawing rainy scenes, counting raindrops, and talking about the water cycle in age-appropriate terms. This holistic method supports deeper understanding while keeping learning joyful and relevant.

6.4.2 Play-Based Learning

Play is the natural language of children and a powerful medium for learning. In a play-based approach, children learn by exploring, experimenting, and interacting with their environment in a relaxed and enjoyable setting. This type of learning supports social, emotional, cognitive, and physical development. Teachers act as facilitators, creating play-rich environments with toys, games, role-play areas, building blocks, and art materials.

Through pretend play, for example, children develop language, storytelling, and problem-solving skills. Free play allows for self-expression and creativity, while guided play allows teachers to introduce concepts like numbers, letters, or shapes in an informal, engaging way. Play-based learning builds a foundation for academic skills in a stress-free, developmentally appropriate manner.

6.4.3 Activity-Based Learning

Activity-based learning involves hands-on tasks that allow children to actively participate in the learning process. Rather than listening passively, children engage in doing—cutting, sorting, counting, building, drawing, matching, or experimenting. This makes learning more meaningful and memorable.

For example, teaching numbers through clay modelling or pattern recognition using beads promotes fine motor skills while reinforcing mathematical understanding. Activities cater to different learning styles (visual, auditory, kinaesthetic) and promote collaboration, exploration, and creativity. This method supports concept clarity, particularly in early literacy and numeracy, while keeping children actively involved.

Notes

Techniques for effective teaching at the foundational and preparatory stage

6.4.4 Inquiry-Based Learning

Inquiry-based learning encourages children to ask questions, investigate, and discover answers on their own or with guidance. It nurtures curiosity and critical thinking by placing children in the role of young explorers. The process begins with a question, problem, or observation, such as “Why do leaves change color?” or “Where does the sun go at night?” Teachers support children by providing materials, guiding discussions, and encouraging observation and exploration. This approach strengthens scientific thinking, reasoning skills, and confidence. Inquiry-based learning is particularly effective in developing independent learning habits and making children feel that their ideas and questions are valued.

6.4.5 Storytelling

Storytelling is a timeless and powerful pedagogical tool that enhances language development, listening skills, imagination, and emotional intelligence. Stories can be used to introduce new concepts, explore values, build vocabulary, and teach social skills. Through stories, children learn to express ideas, sequence events, and understand cause and effect. Teachers can use picture books, puppets, and storytelling props, or oral narration to engage children.

A story about a lost puppy, for instance, can lead to discussions on empathy, directions, or even community helpers. When stories are connected to themes or real-life experiences, they deepen understanding and promote meaningful learning.

6.4.6 Experiential Learning

Experiential learning involves learning by doing and reflecting on experiences. It enables children to understand concepts through direct, first-hand experience.

For example, learning about plants becomes more impactful when children plant seeds, water them, and observe their growth over time. Such experiences build observation skills, patience, responsibility, and scientific understanding. This approach is particularly effective for teaching environmental studies, health, and practical life skills. Experiential learning helps children internalize knowledge by engaging multiple senses and making learning real and lasting.

6.5 USE OF TEACHING-LEARNING MATERIALS (TLMs)

Teaching-Learning Materials (TLMs) are essential tools that make abstract concepts more concrete, tangible, and understandable for young children. These materials can be both teacher-made and commercially available, including flashcards, storybooks, number rods, puppets, beads, puzzles, and real-life objects.

Children are more engaged in learning when they use multiple senses and engage in hands-on activities. From simple toys for play to specific manipulatives for counting and numeracy, a variety of TLMs are essential in this Stage. Well-chosen TLMs support multi-sensory learning and help cater to diverse learners. For instance, a simple number line can help children visualize counting, while picture cards can assist in building vocabulary. Recycled or low-cost materials can be creatively repurposed as effective TLMs, promoting resourcefulness and sustainability. The strategic use of TLMs keeps children engaged and helps bridge the gap between theory and practice.

6.5.1 Technology-Based Teaching-Learning Material (TLM) or Digital TLM

Teachers can thoughtfully integrate digital resources based on the needs of their classroom. Research shows that moderate, well-regulated use of technology can support children's mental well-being, while excessive unregulated use may be harmful. Digital TLM should offer a variety of contextual, age-appropriate, and multilingual content.

Teachers can use digital content in diverse forms, contexts, and formats to cater to the varied abilities and learning needs of children, thereby promoting inclusivity. This may include the use of audio and video materials, virtual reality experiences, illustrated texts such as picture books, and interactive tools like games, puzzles, and quizzes.

Using technology to introduce unfamiliar concepts for example, dinosaurs, planets, or oceans through simple, engaging presentations helps build children's vocabulary and background knowledge, enriching their overall learning journey.

Notes

Techniques for effective teaching at the foundational and preparatory stage

**CHECK YOUR PROGRESS 6.2**

1. Explain the importance of play-based and activity-based learning at the Foundational and Preparatory Stages. How do these approaches support holistic development in young children?
2. Describe the role of storytelling and teaching-learning materials (TLMs) in early childhood education. How can a teacher use them effectively to enhance learning outcomes?
3. Which of the following best describes the theme-based approach?
 - a) Learning based on strict textbook content
 - b) Integrating different subjects around a central idea or topic
 - c) Teaching through lectures and repetition
 - d) Relying on assessments for learning
4. What is the primary benefit of using play-based learning in early childhood classrooms?
 - a) It ensures children complete homework on time
 - b) It helps children memorize facts quickly
 - c) It supports holistic development in a stress-free environment
 - d) It reduces the need for teacher involvement
5. Which of the following is an example of experiential learning?
 - a) Listening to a story about a garden
 - b) Watching a video about plant growth
 - c) Planting seeds and observing their growth
 - d) Memorizing the names of plants
6. Teaching-Learning Materials (TLMs) are most useful because they:
 - a) Keep the classroom quiet
 - b) Replace the need for a teacher

- c) Make abstract concepts concrete and understandable
- d) Reduce the time needed for assessments

Answer : 3 - b; 4 - c; 5 - c; 6 - c

6.6 LEARNER-CENTERED LESSON PLANNING WITH EFFECTIVE PEDAGOGICAL APPROACHES

Teaching is an intentional process aimed at facilitating children's learning, which demands thoughtful and systematic planning. Effective planning structures classroom activities around the competencies and learning outcomes to be achieved, carefully selects pedagogical approaches, resources, and assessment methods, and incorporates supportive elements such as home assignments and classroom displays that reinforce learning.

A learner-centered plan places children at the heart of the learning process, emphasising their active role in constructing knowledge. It encourages curiosity, problem-solving, and adopts flexible methods that address multiple intelligences and diverse learning styles. In such settings, teachers act as facilitators who observe children's interests, scaffold learning experiences, and adapt activities to meet evolving needs.

Designing effective, learner-centered lesson plans for young children involves creating meaningful learning experiences that align with their developmental stages, interests, and natural ways of learning. Robust planning is grounded in a clear understanding of curricular goals, expected competencies, learning outcomes, children's prior knowledge, and the available teaching-learning materials.

Therefore, at the Foundational and Preparatory Stage, children learn most effectively through hands-on exploration, play, and social interaction. Therefore, lesson planning at this stage must prioritise age-appropriate pedagogies, including play-based, activity-based, theme-based, inquiry-based, and experiential learning.

Key elements of learner-centered lesson planning include:

- Clearly articulated competencies, learning outcomes, and lesson objectives.
- A balance of teacher-led, teacher-guided, and child-led activities.

Notes

**Notes****Techniques for effective teaching at the foundational and preparatory stage**

- Well-planned duration and sequencing of activities.
- Relevant content and materials that support learning.
- Thoughtful classroom organization (seating, displays, accessible resources).
- Strategies to support children who need additional help.
- Appropriate methods of assessment to monitor progress and inform instruction.

A well- designed lesson plan also integrates opportunities for communication, creativity, physical activity, and emotional expression, thereby fostering holistic development. Incorporating teaching-learning materials (TLMs), storytelling, music, and art makes learning experiences richer and more relatable.

Finally, such plans provide room for reflection and assessment through observations, children's work samples, and anecdotal records, enabling teachers to continually tailor instruction to meet each child's unique and evolving needs.

Other Important Considerations for Planning

- **Planning for Differentiated Instruction**

Teachers can make learning meaningful for children with diverse interests and abilities by differentiating content, methods, materials, and assessments. While individual tailoring may be difficult in large classes, grouping children with similar needs is effective. This requires careful observation of the ways in which children interact, play, and learn. Examples include:

- In a block play session, some children might build towers and discuss them, while others sort blocks by color or size, and some create imaginative objects.
- While exploring plants, children could compare sizes and textures, name parts, draw plants, or place labels with help from peers.
- For topics like butterflies, different groups might use storybooks, videos, puzzles, or models.
- Reading sessions can include texts at different levels.

- Worksheets can range from simple to more complex, matching varied abilities.

- **Homework**

Homework is an extension of the learning process. Work done at home is a consolidation of work done in school and helps make students capable of doing things on their own. It is based on the teaching provided to them in class. Homework can be fun and provides a unique challenge to students. It can also help to connect school with the student's home, especially in the Foundational and Preparatory Stages. Homework at the Foundational Stage should be joyful, simple, and linked to home life, never involving long hours of writing. Examples include:

- Talking to grandparents about family names.
- Observing and recreating rangoli designs.
- Helping family members and sharing the experience at school.
- Exploring flower colors near home.
- Enjoying storybooks from the class library.

Homework should be introduced only after children are settled into school routines and should be manageable for them to complete independently, without adult help.

Here is the sample learner-centered lesson plan for the reference:

Sample Learner-Centered Lesson Plan

Stage: Preparatory (Age group: 5–6 years)

Theme: My Family

Topic: Recognizing and Talking about Family Members

Duration: 45 minutes

Pedagogical Approaches Used: Theme-based, Play-based, Storytelling, Activity-based, Experiential Learning

Learning Outcomes: After this class, the learner

- identifies and names different members of a family.
- communicates and expresses their thoughts about their family.

Notes

Techniques for effective teaching at the foundational and preparatory stage

- develops vocabulary related to family (e.g., mother, father, siblings, grandparents).
- participates in creative and group activities with peers.

Table 6.1: Lesson Plan

Component	Details
1. Warm-Up (5 mins)	Greet the children with a family song or rhyme (e.g., “Finger Family”). Let them sing along to create a welcoming and engaging start.
2. Introduction (5 mins)	Ask open-ended questions like “Who lives in your house?” “What do you call them?” Show flashcards with family members.
3. Storytelling (10 mins)	Narrate a short story about a family (e.g., “Ravi’s Big Family”) using puppets or picture cards. Pause periodically to ask questions and involve children in storytelling.
4. Activity (15 mins)	Art Activity: Children draw or paste pictures of their family members in a family tree template. Teachers move around to assist and talk to children about their drawings.
5. Sharing Time (5 mins)	A few children present their artwork and talk about their family. Others listen and ask questions to foster peer learning.
6. Reflection & Closure (5 mins)	Recap the family members using flashcards. End with a family-themed goodbye rhyme.
7. Assessment	Teacher uses a checklist and record observations children’s participation, vocabulary used, and expression during the activities.

Materials Required

- Flashcards with pictures of family members
- Puppets or storybook

- Crayons, glue, family tree worksheet
- Picture cut-outs from old magazines
- Anecdotal record sheet for assessment

This lesson demonstrates how integrating multiple pedagogical approaches in a learner-centered plan creates a nurturing, engaging, and developmentally appropriate environment. It values children's voices, builds key foundational skills, and supports emotional and social growth.

**CHECK YOUR PROGRESS 6.3**

1. Explain how learner-centered lesson planning addresses the developmental needs of children at the Foundational and Preparatory Stage.
2. Describe how the sample lesson plan on the theme "My Family" demonstrates the integration of different pedagogical approaches.
3. What is the main focus of learner-centered lesson planning at the Foundational and Preparatory Stage?
 - a) Rote memorization
 - b) Teacher-led instruction
 - c) Active Hands-on exploration and child participation
 - d) Written assignments
4. Which of the following is NOT mentioned as a pedagogical approach in the sample lesson plan?
 - a) Storytelling
 - b) Activity-based learning
 - c) Experiential learning
 - d) Lecture method
5. What type of material is used in the sample lesson plan to help children express their understanding of family?
 - a) Worksheets with mathematical problems

*Notes*

Notes

Techniques for effective teaching at the foundational and preparatory stage

- b) Art materials for creating a family tree
 - c) Printed newspaper articles
 - d) Lined notebooks for dictation
6. In the assessment section of the sample lesson plan, what method is used by the teacher to evaluate students?
- a) Written test
 - b) Oral recitation
 - c) Checklist and systematic observation
 - d) Group discussion

Answer : 3 - c; 4 - d; 5 - b; 6 - c

6.7 DESIGNING A BALANCED DAILY SCHEDULE

A well-structured and balanced daily schedule is essential for creating a nurturing and effective learning environment for young children at the Foundational and Preparatory Stage.

Young learners thrive in settings where routines are predictable yet flexible, and where a variety of developmentally appropriate activities are thoughtfully integrated throughout the day. A balanced schedule promotes a sense of security, builds time management skills, and ensures that children's physical, emotional, cognitive, and social needs are met. It includes a rich blend of active and quiet times, individual and group activities, structured and free play, indoor and outdoor experiences, and opportunities for rest and nourishment. Carefully planned routines help maximize learning time while preventing fatigue or overstimulation, making the overall learning experience joyful and productive. A thoughtfully designed daily schedule also supports smooth transitions between activities and allows teachers to observe, guide, and support children more effectively. Here is the sample of daily routine for young learners for the reference:

*Notes*

**Table 6.2: Sample Daily Routine for Young Learners
(Age Group: 4-6 years)**

Time	Activity	Purpose
8:30 – 9:00 AM	Arrival & Free Play	Settling in, social interaction, emotional readiness
9:00 – 9:15 AM	Circle Time / Morning Greeting	Building community, calendar, weather, sharing news
9:15 – 9:45 AM	Thematic Learning Block (Storytelling / Activity)	Language, literacy, and concept development
9:45 – 10:15 AM	Outdoor Play	Gross motor development, teamwork, free exploration
10:15 – 10:30 AM	Snack Time	Nutrition, social conversation, hygiene practice
10:30 – 11:00 AM	Numeracy Activities (Games, Manipulatives)	Number sense, logic, fine motor skills
11:00 – 11:30 AM	Creative Time (Art, Music, or Role Play)	Expression, imagination, sensory development
11:30 – 12:00 PM	Inquiry / Exploration (Science, Nature, Themes)	Observation, questioning, critical thinking
12:00 – 12:15 PM	Reflection & Recap	Revisiting the day's learning, language development
12:15 – 12:30 PM	Story Time & Dismissal	Calming down, listening, preparing to go home

This routine offers a holistic blend of academic, social, physical, and emotional development opportunities, making learning both effective and enjoyable for young children.

Notes

Techniques for effective teaching at the foundational and preparatory stage

**CHECK YOUR PROGRESS 6.4**

1. Why is a balanced daily schedule important for young learners at the Foundational and Preparatory Stage?
2. Explain how different components of a daily routine contribute to the holistic development of young children.
3. What is the main purpose of including a mix of quiet and active periods in a young child's daily schedule?
 - a) To reduce the number of subjects taught
 - b) To limit interactions among children
 - c) To ensure holistic development and prevent overstimulation
 - d) To increase homework time
4. Which of the following activities best supports gross motor development in a daily routine?
 - a) Storytelling
 - b) Outdoor Play
 - c) Circle Time
 - d) Drawing
5. During which part of the sample routine do children typically engage in observation and critical thinking?
 - a) Snack Time
 - b) Free Play
 - c) Inquiry / Exploration Time
 - d) Creative Time
6. What is the main benefit of having a predictable daily schedule for young learners?
 - a) It keeps children busy all day
 - b) It ensures every child scores high in exams
 - c) It creates a sense of security and routine

- d) It reduces the need for teacher involvement

Answer : 3 - c; 4 - b; 5 - c; 6 - c

6.8 LET US SUM UP

This chapter highlights the importance of developmentally appropriate, learner-centered pedagogy for young children at the Foundational and Preparatory Stages. It emphasises that effective teaching must be rooted in child-centered principles, recognizing children's unique developmental needs, interests, and learning styles. Various pedagogical approaches such as theme-based, play-based, activity-based, inquiry-based, storytelling, and experiential learning are discussed as key techniques that foster holistic growth by integrating cognitive, emotional, physical, and social development.

The chapter also highlights the value of Teaching-Learning Materials (TLMs) in making abstract concepts tangible and engaging. Learner-centered lesson planning was shown to be essential for creating meaningful, inclusive, and flexible learning experiences, where teachers act as facilitators and observers.

Additionally, the importance of a well-balanced daily schedule was explored, highlighting the need for structured yet flexible routines that incorporate a variety of learning experiences, including active play, rest, creativity, and interaction. Together, these elements provide a strong foundation for lifelong learning, helping children develop confidence, curiosity, and a love for learning.

6.9 END EXERCISES

1. Define the principles of effective pedagogy for early learners.
2. Explain the role of planning in classroom instruction at the Foundational Stage.
3. Describe three pedagogical approaches and their benefits.
4. What are the key features of a developmentally appropriate daily routine?
5. Design a simple lesson plan using any two pedagogical approaches discussed in the unit.
